

Basecraft

User Manual

Version 0.3.2 · By Hewnpath

What Basecraft does

Basecraft adds a Pivot view to Obsidian Bases. Pick one property as rows, another as columns, choose an aggregation, and your entries are grouped into a cross-table — like a spreadsheet pivot, but native to your vault. It is built on the official Bases plugin API introduced in Obsidian 1.10.

Installation

From the community store

Coming soon. Once Basecraft is approved by Obsidian, you will be able to install it from Settings → Community plugins → Browse.

Manual install

1. Download main.js, manifest.json and styles.css from the [latest release](#).
2. Place them inside <your-vault>/.obsidian/plugins/basecraft/.
3. Settings → Community plugins → enable, then toggle Basecraft on.
4. Make sure the Bases core plugin is enabled (Obsidian 1.10 or newer).

Quick start

1. Create a .base file from the command palette: Bases: Create new base.
2. Add a new view, choose Pivot.
3. In the Basecraft toolbar, set Rows, Columns and an Aggregation.

Toolbar reference

Control	What it does
Rows	Property whose unique values become the row headers.
Columns	Property whose unique values become the column headers.
Aggregation	Count and Sum are free. Average, Min, Max, Median, Distinct count are Pro.
Value	The property aggregated by Sum / Average / Min / Max / Median. Ignored for Count.

Display	Raw values (free), or % of total / row / column (Pro).
Heatmap	Pro. Tints each cell based on its value across the grid.
Export CSV	Pro. Saves the pivot as a .csv (Excel-friendly).
Export Excel	Pro. Saves a styled .xlsx with header colors, heatmap and totals.

Pro features

- Advanced aggregations. Average, Min, Max, Median, Distinct count, in addition to free Count and Sum.
- Drill-down. Click a cell to open a list of the notes that contributed to it.
- Heatmap conditional formatting. Each cell is tinted between the smallest and largest in the grid.
- Percentage display. Show values as % of total, % of row, or % of column.
- CSV export. Save the pivot as Excel-friendly CSV in one click.
- Excel export. Save a styled .xlsx — header in accent color, heatmap fills, totals preserved.
- Future Pro additions. Multi-dimensional rows / columns and PNG export are next, included in your purchase.

Activating Pro

After purchase you receive a license key by email. Settings → Basecraft → paste the key into Pro license key. The toolbar switches from gated to unlocked. A single license activates on up to three devices.

Troubleshooting

Pivot view does not appear

Check that Bases is enabled in Core plugins and Obsidian is 1.10+. Reload after enabling.

The pivot is empty

You need a Rows and a Columns property — both required.

Property dropdowns are empty

The base has no properties yet. Add some frontmatter to a few notes.

Pro stays locked after pasting the key

Make sure the key was copied without trailing whitespace. Status reads 'Pro: active' when accepted.
