

Basecraft

Pivot tables for Obsidian Bases

\$14

one-time, three-device license

The problem

Obsidian Bases ships with a table view and a card view. There is no built-in way to summarize. If you want to count tasks per status × priority, sum hours per project × week, or compare entries across two dimensions, you have to leave the vault.

The solution

One Pivot view that handles it. Built on the official Bases plugin API, native to your vault, no external sync, no cloud accounts.

Pro — \$14 one-time

- **Drill-down.** Click any cell to see and open the matching notes.
- **Heatmap.** Conditional formatting that makes outliers obvious.
- **Percentage display.** Show values as % of total, row, or column.
- **Advanced aggregations.** Average, min, max, median and distinct count.
- **CSV export.** Save the current pivot in one click.
- **Future Pro features included.** Multi-dimensional rows / columns and PNG export are next.

Why one-time

No subscription. The license works on up to three devices and never expires. Updates — including new Pro features — are included.
