

Basecraft

User Manual

Version 0.2.0 · By Hewnpath

What Basecraft does

Basecraft adds a Pivot view to Obsidian Bases. Pick one property as rows, another as columns, choose an aggregation, and your entries are grouped into a cross-table — like a spreadsheet pivot, but native to your vault. It is built on the official Bases plugin API introduced in Obsidian 1.10.

Installation

From the community store

Coming soon. Once Basecraft is approved by Obsidian, you will be able to install it from Settings → Community plugins → Browse.

Manual install

1. Download **main.js**, **manifest.json** and **styles.css** from the [latest release](#).
2. Place them inside `<your-vault>/obsidian/plugins/basecraft/`.
3. In Obsidian: Settings → Community plugins → turn on community plugins, find Basecraft in Installed plugins, toggle it on.
4. Make sure the **Bases** core plugin is enabled (Settings → Core plugins → Bases). Bases requires Obsidian 1.10 or newer.

Quick start

1. Create a **.base** file from the command palette: *Bases: Create new base*.
2. In the new base, add a new view and choose **Pivot**.
3. In the Basecraft toolbar, set **Rows**, **Columns**, and an **Aggregation**. The pivot recomputes immediately.

Toolbar reference

Control	What it does
Rows	Property whose unique values become the row headers.
Columns	Property whose unique values become the column headers.

Aggregation	Count and Sum are free. Average, Min, Max, Median and Distinct count are Pro.
Value	The numeric property used by Sum / Average / Min / Max / Median. Ignored for Count.
Display	Raw values (free), or % of total / row / column (Pro).
Heatmap	Pro. Tints each cell based on its value across the grid.
Export CSV	Pro. Saves the current pivot as a .csv file.

Pro features

- **Advanced aggregations.** Average, Min, Max, Median and Distinct count, in addition to the free Count and Sum.
- **Drill-down.** Click a cell to open a list of the notes that contributed to it. Click any name to jump to the note.
- **Heatmap conditional formatting.** Each cell is tinted based on where its value sits between the smallest and largest cell in the grid.
- **Percentage display.** Show values as % of total, % of row, or % of column instead of raw numbers.
- **CSV export.** Save the current pivot as a .csv file with one click.
- **Future Pro additions.** Multi-dimensional rows / columns and PNG export are next, included in your purchase.

Activating Pro

After your purchase you will receive a license key by email. Open Obsidian → Settings → Basecraft, paste the key into **Pro license key**, and the toolbar will switch from gated to unlocked. A single license activates on up to three devices.

Troubleshooting

Pivot view does not appear in the view selector

Check that the Bases core plugin is enabled and that Obsidian is at least 1.10. Reload Obsidian (Ctrl+R) after enabling the plugin.

The pivot is empty

You probably have not picked a Rows or Columns property yet. Both are required.

Property dropdowns are empty

The base has no properties to pivot on. Open a few of the matching notes, add some frontmatter (status, priority, etc.), then return to the pivot.

Pro features stay locked after pasting the key

Make sure the key was copied without trailing whitespace. The status line under the key field will read "Pro: active" once the key is accepted.

Support
