

Basecraft

User Manual

Version 0.3.2 · By Hewnpath

What Basecraft does

Basecraft adds a Pivot view to Obsidian Bases. Pick one property as rows, another as columns, choose an aggregation, and your entries are grouped into a cross-table — like a spreadsheet pivot, but native to your vault. It is built on the official Bases plugin API introduced in Obsidian 1.10.

Installation

From the community store

Coming soon. Once Basecraft is approved by Obsidian, you will be able to install it from Settings → Community plugins → Browse.

Manual install

1. Download **main.js**, **manifest.json** and **styles.css** from the [latest release](#).
2. Place them inside `<your-vault>/obsidian/plugins/basecraft/`.
3. In Obsidian: Settings → Community plugins → turn on community plugins, find Basecraft in Installed plugins, toggle it on.
4. Make sure the **Bases** core plugin is enabled. Bases requires Obsidian 1.10 or newer.

Quick start

1. Create a **.base** file from the command palette: *Bases: Create new base*.
2. In the new base, add a new view and choose **Pivot**.
3. In the Basecraft toolbar, set **Rows**, **Columns**, and an **Aggregation**.

Toolbar reference

Control	What it does
Rows	Property whose unique values become the row headers.
Columns	Property whose unique values become the column headers.
Aggregation	Count and Sum are free. Average, Min, Max, Median and Distinct count are Pro.

Value	The numeric property used by Sum / Average / Min / Max / Median. Ignored for Count.
Display	Raw values (free), or % of total / row / column (Pro).
Heatmap	Pro. Tints each cell based on its value across the grid.
Export CSV	Pro. Saves the current pivot as a .csv file.
Export Excel	Pro. Saves a styled .xlsx with the heatmap and totals preserved.

Pro features

- **Advanced aggregations.** Average, Min, Max, Median and Distinct count, in addition to the free Count and Sum.
- **Drill-down.** Click a cell to open a list of the notes that contributed to it.
- **Heatmap conditional formatting.** Each cell is tinted between the smallest and largest in the grid.
- **Percentage display.** Show values as % of total, % of row, or % of column.
- **CSV export.** Save the current pivot as a CSV file with one click.
- **Excel export.** Save a styled .xlsx with header colors, heatmap fills, percentages and totals preserved.
- **Future Pro additions.** Multi-dimensional rows / columns and PNG export are next, included in your purchase.

Activating Pro

After your purchase you receive a license key by email. Open Obsidian → Settings → Basecraft, paste the key into **Pro license key**, and the toolbar switches from gated to unlocked. A single license activates on up to three devices.

Troubleshooting

Pivot view does not appear in the view selector

Check that Bases is enabled in Core plugins and that Obsidian is 1.10 or newer. Reload Obsidian after enabling.

The pivot is empty

You need to pick both a Rows and a Columns property — they are required.

Property dropdowns are empty

The base has no properties yet. Add some frontmatter (status, priority, etc.) to a few notes.

Pro features stay locked after pasting the key

Make sure the key was copied without trailing whitespace. The status under the field reads "Pro: active" when accepted.

Support
