What a pivot view looks like · status — priority with heatmap.

Version 0.3.2

By Hewnpath · github.com/Cexyz01/obsidian-basecraft

Welcome

Basecraft adds a Pivot view to Obsidian Bases. Pick one property as rows, another as columns, choose an aggregation, and your entries are grouped into a cross-table â€” like a spreadsheet pivot, but native to your vault.

REQUIRES

Obsidian 1.10 or newer with the Bases core plugin enabled. Bases is enabled by default in fresh installs.

Install

From the community store

Coming soon. Once Basecraft is approved, install it from Settings â†’ Community plugins â†’ Browse and search for Basecraft.

Manual install

- 1 Download main.js, manifest.json and styles.css from the latest GitHub release.
- 2 Place them inside <vault>/.obsidian/plugins/basecraft/

```
<your-vault>/.obsidian/plugins/basecraft/
```

- 3 Open Settings â†’ Community plugins, enable community plugins, then toggle Basecraft on.
- 4 Confirm Bases is enabled in Core plugins. Reload Obsidian if you just enabled it.

Quick start

- 1 Open the command palette (Ctrl+P) and run 'Bases: Create new base'.
- 2 Inside the new base, click + to add a view, choose Pivot.
- 3 In the Basecraft toolbar set Rows, Columns and an Aggregation. The pivot recomputes immediately.

Toolbar reference

Control	What it does	Tier
Rows	Property whose unique values become row headers.	Free
Columns	Property whose unique values become column headers.	Free
Aggregation	Count and Sum.	Free
	Average, Min, Max, Median, Distinct count.	Pro
Value	The numeric property used by Sum / Average / Min / Max / Median.	Free
Display	Raw values.	Free
	% of total / % of row / % of column.	Pro
Heatmap	Tints each cell based on its value across the grid.	Pro
Export CSV	Saves the pivot as Excel-friendly CSV.	Pro
Export Excel	Styled .xlsx with header colors, heatmap and totals.	Pro

Pro features

Drill-down

Click any cell to open a list of the notes that contributed to it. Click a name to open the note.

Heatmap

Each cell is tinted between the smallest and largest value in the grid. Outliers become obvious.

Percentages

Show values as % of total, % of row, or % of column. Useful for distribution analysis.

Advanced aggregations

Average, Min, Max, Median and Distinct count, in addition to free Count and Sum.

CSV export

Save the pivot as a CSV file. Excel-friendly: opens with proper columns in any locale.

Excel export

Save a styled .xlsx â€” header in accent color, heatmap fills, totals preserved, frozen first row and column.

Future Pro additions

Multi-dimensional rows / columns and PNG export are next, included in your purchase.

Activate Pro

After your purchase you receive a license key by email. Open Obsidian, go to Settings â†’ Basecraft, and paste the key into the Pro license key field. The toolbar switches from gated to unlocked, and the status line under the field reads Pro: active.

NOTE

A single license activates on up to three devices. To free a slot, open Settings â†’ Basecraft on the device you want to remove and clear the license key.

Troubleshooting

The Pivot view does not appear in the view selector

Bases must be enabled in Core plugins, and Obsidian must be 1.10 or newer. After enabling either, reload Obsidian (Ctrl+R or restart).

The pivot is empty

Both Rows and Columns are required. Pick a property in each dropdown of the toolbar.

Property dropdowns are empty

The base has no properties to pivot on. Open a few of the matching notes and add some frontmatter (status, priority, etc.).

Pro features stay locked after pasting the key

Make sure the key was copied without trailing whitespace. The status line under the field reads 'Pro: active' once accepted.

Support

Bug reports and feature requests are welcome at github.com/Cexyz01/obsidian-basecraft/issues. We read every one.

THANK YOU

Basecraft is built and supported by an indie developer at Hewnpath. If Pro is useful to you, every purchase directly funds future updates and new features.
